1 INTRODUCTION

The Castle River Sub-Regional Integrated Resource Plan was approved by the Economic Planning and Resource Development Committee of Cabinet on 19 June 1985. Implementation of the plan will be through the normal programs and budget procedures used by the agencies and institutions involved in on-going decision-making for public lands and resources, as well as through private sector initiatives.

2 PURPOSE

Alberta Forestry, Lands and Wildlife has adopted principles and procedures for implementing integrated resource plans. These call for the preparation of an implementation document to support continued co-ordination and integration of public land and resource management activities.

This document identifies implementation commitments and intentions by Forestry, Lands and Wildlife divisions in terms of the following:

(a) Specific programs and projects that can be determined at this time and are either identified in the plan, or are required to fulfill the objectives of the plan. The document is not intended to be a complete description of established program delivery.

(b) Restrictions and guidelines on granting dispositions and other inter-agency referrals contained in the plan. While no new information, is provided, the existing material is expressed in a form convenient for day-to-day referrals.

This document is an internal government report and will be distributed at the discretion of the Southern Region Regional Resource Management Committee (RRMC).

3 WORK PROGRAM

The implementation document covers only initiatives that are consistent with the direction provided in the Castle River Sub-Regional Integrated Resource Plan. These activities and programs must be accomplished within existing budgets and funding based on provincial priorities. Proposed project initiation dates should be viewed as targets only. Variables such as budget cutbacks, priorities for funding similar projects in other areas, or disasters such as major forest fires in the area could influence when project activities commence.

3.1 Priority Work Program

Project descriptions have been developed by government agencies participating in the Castle River plan. This information has been stored in a computerized data base to simplify retrieval, monitoring and production of up-to-date summary reports. For example, those projects relating to a specific agency with a defined priority can be drawn and sorted with minimal effort.

Two of the summaries are included in Appendix B. Project components within the Castle River plan can also be combined with components elsewhere in the Eastern Slopes region.

Tables in Appendix B summarize the implementation projects. Table B-1 lists the priority work program which includes projects identified as being of high to moderate priority. Table B-2 lists all currently identified project components.

3.2 Statements of Intent

The following are statements of intent that address, in general terms, the implementation plans for the new initiatives or project enhancements.

3.2.1 Alberta Forest Service

Access Management Plan - to develop an access management plan that addresses management intents expressed in the Castle River IRP (i.e., wildlife concerns in Resource Management Area, [RMA]-B and extensive recreation opportunities in RMA-D). The access management plan will address the types of vehicles, timing (seasonal) and other limits to vehicle use. It will also provide a mapped system of recommended trails and routes for each RMA. This will give further direction and aid in the implementation phase (i.e., snowmobile, OHV and recreational sub-project components).

Reclamation - to conduct trail reclamation in ESP Zone 1 areas and portions of RMA-D where recreational off-highway vehicle use will be highly restricted. Reclamation projects for site stabilization and environmental purposes are to be undertaken subsequent to access management plan approval and implementation.

Range Management - to revise and update range management plans for Castle River, Southend, Mill Creek and Jackson Creek allotments. The stocking capability is to be maintained over the long-term by proceeding with range improvements in RMAs, A,B,C and D.

Recreation - to provide and maintain a variety of recreational opportunities and facilities according to management intentions prescribed in the Castle River plan. This includes dispersed, non-motorized opportunities in RMAs B and D (and portions of RMAs A and C), and varying levels of facility development in RMAs A,B,C and D. Priorities for recreation include trail and trailhead development for hiking, off-highway vehicle and equestrian use, and auto access facilities.

3.2.2 Fish and Wildlife Division

Elk Winter Range Enhancement - to conduct a preliminary elk winter range assessment within the Castle River planning area. This review will document elk-livestock interactions, depredation problems and range conditions, and identify habitat management options for Public Lands Division that will minimize elk management problems. Participation of the Fish and Wildlife Division in range management reviews and range improvement programs produced by the Alberta Forest Service and the Public Lands Division will provide similar benefits.

Access Mangement - to participate in development of an access management plan that addresses management intentions expressed in the Castle River IRP (i.e., wildlife concerns in RMA-B and extensive recreation opportunities in RMA-D). The access management plan will address the types of vehicles, timing (seasonal) and other types of vehicle use. It will also provide a mapped system of recommended trails and routes for each RMA. This will give further direction and aid in the implementation phase (i.e., snowmobile, OHV and recreational sub-project components).

Habitat Development - to continue with habitat development, as opportunities arise, using "Buck for Wildlife" funds. This will include proposals by the Alberta Fish and Game Association and other agencies, and mitigative measures resulting from various land use activities.

Stream and Lake Inventories - to provide direction for future management of species as well as habitat protection and development strategies.

Mountain Goat - to conduct habitat and population inventories for the area's goat population. These studies will provide direction for future population and habitat management strategies, and possible transplants to suitable vacant range.

3.2.3 Public Lands Division

Range Inventory, Management and Improvement - to develop range management plans for all grazing lands within RMA-E for the benefit of livestock and wildlife. The plans will be developed in consultation with the Fish and Wildlife Division, Alberta Forest Service and the lease holders. In particular, forest management on 45 quarter sections in

RMA-E will be identified on a sustained yield basis in consultation with Public Lands Division, Alberta Forest Service, Fish and Wildlife Division, and the lease holder. The 45 quarter sections will be reserved from sale by appropriate reservations.

Projects such as brush clearing, water development and/or cross fencing will be initiated by lease holders in conjuction with the Public Lands Division's range improvement program. The Fish and Wildlife Division will be consulted on all projects in RMA-E. As well, the Alberta Forest Service will be consulted on projects in the 45 quarter sections and other grazing lands in the RMA-E where forest management interests are recognized.

Access Management - to provide continued public access to Mill Creek through the implementation of appropriate reservations.

Reservations and Land Sales - to place reservations on the 45 quarter sections identified as having multiple values in RMA-E.

3.2.4 Regional Co-ordination Office

Project Assistance - to provide planning, co-ordination, inventory, information, mapping and aerial photography services to assist resource management agencies. Support services for plan maintenance and public involvement will also be available.

4 REFERRALS

The Castle River plan contains a large number of commitments relevant to the review of disposition applications and other referrals, and the development of conditions attached to such approvals. This direction is found in various places within the plan document, including in zoning and broad and specific guidelines.

The direction contained in the plan can be fully understood only in the context of the overall document. It is therefore important that users of the plan be familiar with general plan directions (broad objectives, RMA intents) when seeking guidance on particular activities at specific locations.

Where the plan contains guidelines that specifically apply to the particular activity proposed, they will normally direct referral review (i.e., the decision whether to allow the activity, attachment of conditions). Where no guidelines specifically apply (for example, where the activity was not considered when the plan was developed, increasingly general guidance must be sought from specific and broad objectives, zoning intents and RMA intents).

The majority of referrals will be covered by plan guidelines and the content of plan zoning. As an aid to the day-to-day referral process, Appendix A contains RMA-specific versions of the "Table of Compatible Activities", which cover activities that are the subject of referrals. Also indicated are prohibitions and the plan guidelines that are relevant to each activity. These tables should be used as a summary and cross-reference only, and always in conjuction with the plan itself.

5 PUBLIC CONSULTATION

Public consultation will be initiated, where considered appropriate by regional resource mangers, for the development of operational plans, programs and projects. Anticipated public involvement is indicated in tables B-1 and B-2.

A summary of the annual report (see below) will be publicly available. Annual information exchange sessions and other public forums for discussion of plan implementation will be arranged in conjunction with the annual review if necessary.

6 PLAN MAINTENANCE

The Southern Region RRMC will ensure effective co-ordination and monitoring of plan implementation in areas of regional responsibility.

An annual report will be prepared to identify progress in plan implementation and changes to objectives and guidelines. The annual report will contain the following:

- A description of what was achieved in the past year, compared to expectations;
- revision of the priority work program, dropping completed projects, adding the next year's projects and making other revisions as required;
- consideration of the following questions:
    - are plan guidelines being followed?
    - are guidelines that are being followed achieving plan objectives?
    - are stated plan objectives still relevant?
- recommendation for further amendments or revision of major plan review date as appropriate.

The tentative date for further amendments or revision of major plan review is 1991.

The RRMC will deal with plan amendments as they are developed and refined, in accordance with approved procedures and principles.

APPENDIX A

RMA - SPECIFIC TABLES OF COMPATIBLE ACTIVITIES

The following are RMA-specific tables of compatible activities, based on a similar table in the Eastern Slopes Policy and reproduced in the IRP. Only those activities which are generally relevant to disposition requests and other referrals are included (e.g. "hiking" and "off-highway vehicle activity" have been dropped).

KEY

Activity: Activities are generally as defined in the glossary in the Eastern Slopes Policy.

"Serviced Camping" includes commercial base camps.

"Quarriable Minerals Exploration and Development" is the same as "Mineral Exploration and Development" in the Eastern Slopes Policy, but excludes sand and gravel, which is under a separate category.

"Transport/Industrial Corridors/Access" also includes guidelines on industrial access.

Compatibility: "comp/perm" column generally follows the format of the Eastern Slopes Policy, i.e.,

No - Use Not Permitted, either specified in the plan or the Eastern Slopes Policy (1984).

Yes - A Permitted or Compatible Use, subject to plan guidelines and normal operating conditions.

Reference: This is a reference to plan intents, objectives and guidelines which identify or support the project component. The format is:

[RMA] -[resource (3 letters)] [Intent (i)/Objective (o) /Guideline (g)] [Serial Objective/Guideline No.] - [plan page no.].

For example, MINg03-p076 is the third minerals guideline in the particular RMA (D), found on page 76, which prohibits quarriable mineral exploration and development.

"ESP" indicates a reference to the Eastern Slopes Policy (Revised 1984).

APPENDIX B

WORK PROGRAM

The following tables summarize the work program described in 3. Table B-1 includes only those project components which have a medium (2) or high (1) priority and are not yet complete (status is future (F) or ongoing (O) see below). Table B-2 includes all identified components.

KEY

Most terms are as defined in the general plan management document.

Project: Plan name

Sub-project: Agency program

Component: Specific action required

Location: RMA list

Agency Roles:
L = lead
P = participate
R = to be referred
S = service

Other Agencies: Provincial government agencies from departments other than Forestry, Lands and Wildlife and other governments (e.g., municipal authorities, Parks Canada) are included here, along with their roles.

Public Involvement: Includes non-government groups, including lessees, etc.

Priority:
1 = highest
2 = medium
3 = low
4 = no established priority

Status:
F = future
O = ongoing
C = completed
D = deferred
